Typical mite hiding places 3 months after conventional treatment

The images show a facility coated with a conventional diatomaceous earth product. Significant mite infestation is already apparent after three months. This requires immediate action! We recommend speedy treatment with our Home Shield® products, which are very effective in highly humid areas due to their water-repellent properties and which are therefore ideally suited not only for prophylactic treatments, but also, as in this case, for follow-up treatments.

The advantages of our Home Shield® products

Product

- Works in just a few hours
- Maximum yield and efficiency
- In conformance with the EU biocide directive
- No build-up of resistance
- Perfectly effective at high humidity

Animal

- Prevents disease transmission
- Combats feather-plucking
- Reduced feed intake due to intact plumage
- Consistent laying performance due to less stress
- No blood on the eggs
- More pleasant working conditions for the barn staff

Revolution in effectiveness –

The Home Shield[®] products in comparison with conventional diatomaceous earth products

Works 12 x faster

Protects up to 2 x longer

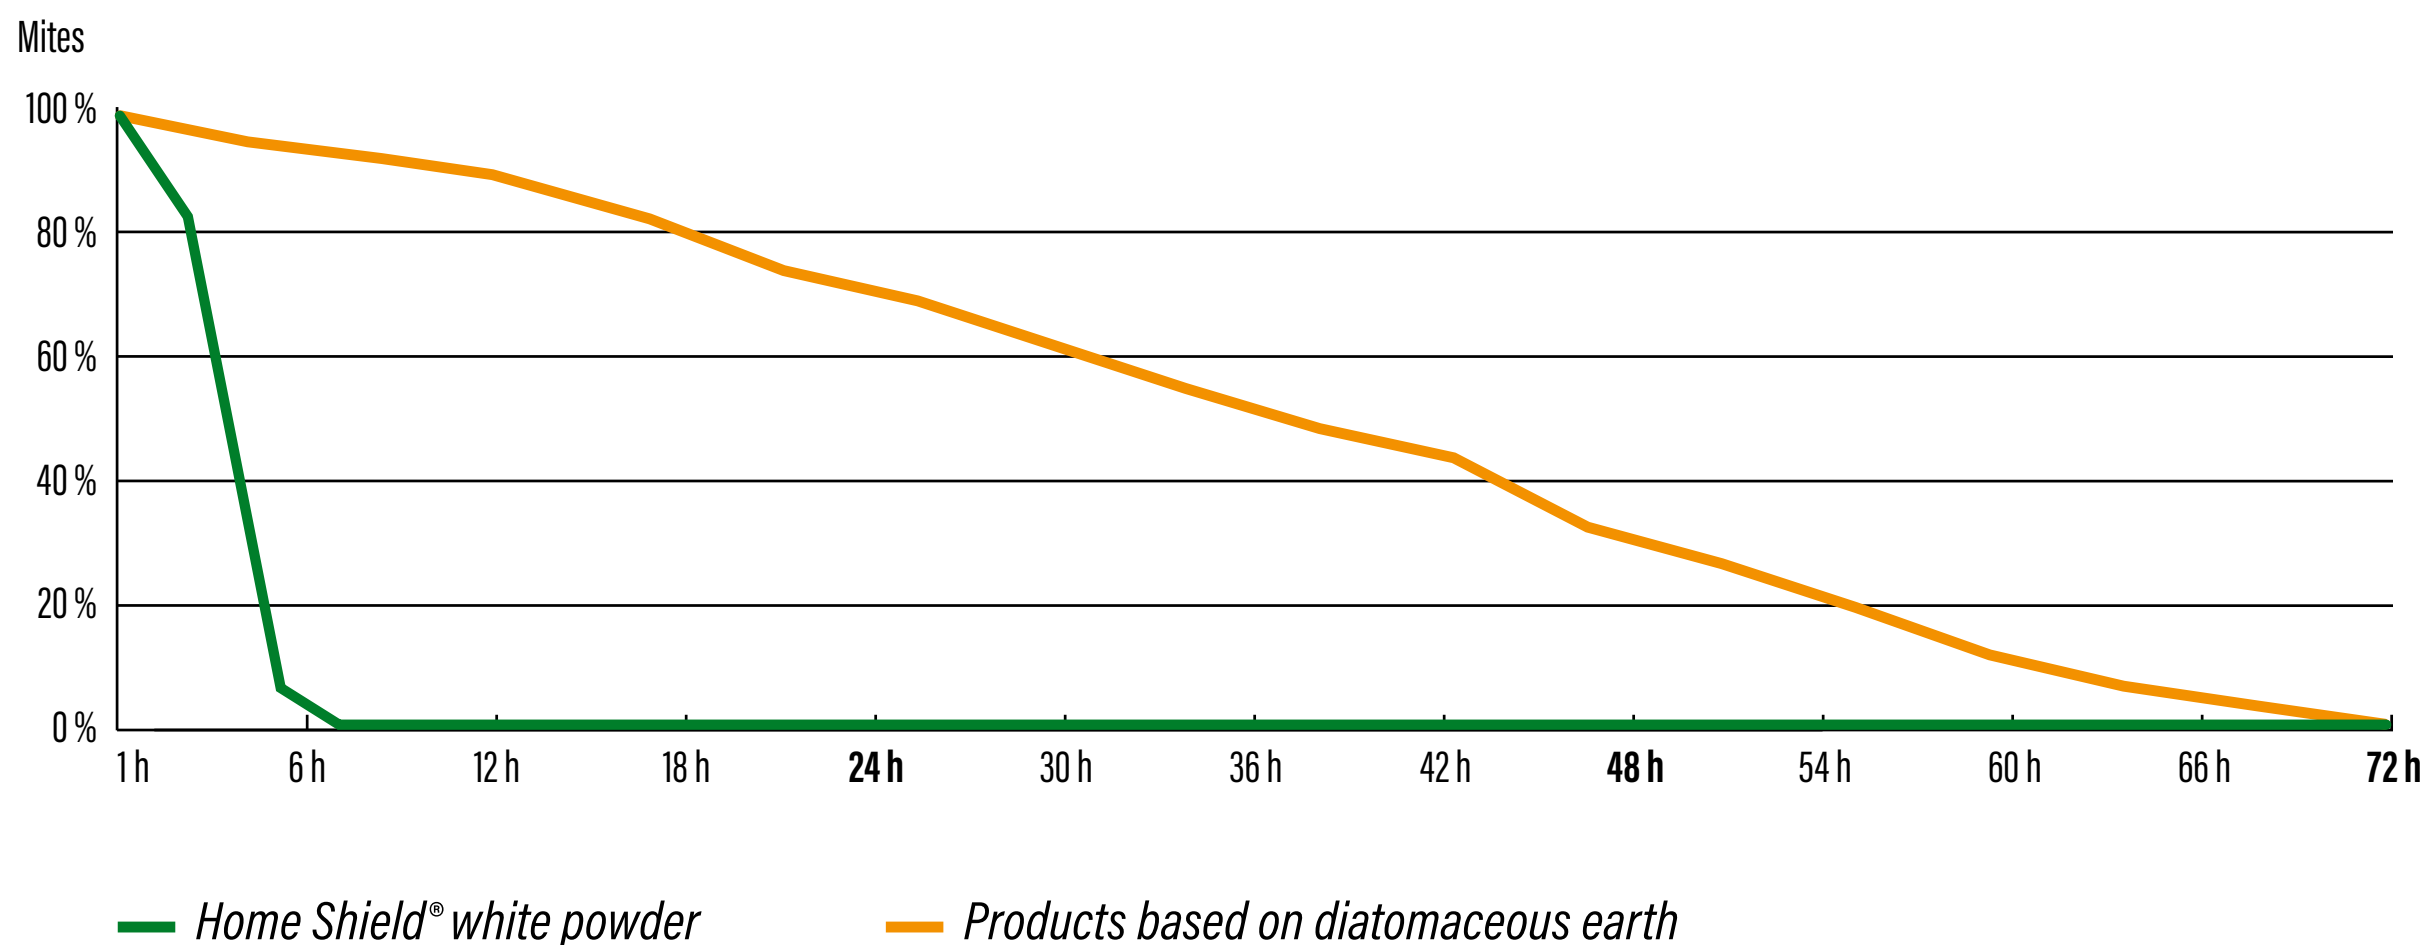

Also adheres to oily surfaces

Works 12 x faster

Efficacy curve of Home Shield® white powder in comparison to conventional diatomaceous earth products.

Home Shield® white powder is effective against the red poultry mite in just a few hours, compared to up to three days with conventional diatomaceous earth products.

Your benefits:

Home Shield[®] combats immediately 4 mite stages

Larvae

Protonymphs

Deutonymphs

Adult mites

Life cycle of the red poultry mite

Your benefits:

 Home Shield[®] products are hydrophobic

Home Shield[®] products are hydrophobic in different ways depending on their intended use.

Protects longer because water repellent

Due to the water-repellent surface, Home Shield[®] works very well and quickly even in high humidity.

Home Shield® products in practical application

Protects longer because water repellent

**Also adheres
to oily
surfaces**

Home Shield® products are hydrophobic. As a result, the product works very well and quickly even in environments with high humidities.

With conventional diatomaceous earth products, moisture penetrates the material. In highly humid environments, this means a very much reduced efficacy against the red poultry mite.

Your benefits:

Home Shield[®] protects up to **2 x longer**

Also adheres
to oily
surfaces

Home Shield[®] creates a particularly thick build-up at the mites' preferred hideouts and offers the animals little refuge.

In contrast, conventional diatomaceous earth products often create small courses of water, which provide the mites with numerous hideouts and routes to get to their host animals.

Liquid application of Home Shield® white powder and Fossil Shield® instant white easy

Also adheres to oily surfaces

The surface of Home Shield® white powder and Fossil Shield® instant white easy resembles a rough mountain landscape. Mites have to travel much longer distances on their way to the host animal. Due to longer contact, the effect on the mite is significantly stronger.

Also adheres to oily surfaces

In the typical mite hiding places (red circles), Home Shield® white powder and Fossil Shield® instant white powder create a particularly thick build-up at the mites' preferred hideouts and offer the animals little refuge.

Powder application

Home Shield[®] white powder

Also adheres
to oily
surfaces

Home Shield[®] creates a particularly thick build-up at the mites' preferred colony sites and offers the animals little refuge.

Home Shield[®] products are flexible in use

Preventive
